Financial Targeting and Gang Stalking
by : Scott Barry

Gentoo Linux is still more Secure on a Laptop than a Linux Phone will Ever Be … Phones are just so easy to hack , Script Kiddies in Kali Linux do it all the Time … The only reason why I am forced on a Tracfone is Because My Paypal and My Bank … The first thing they will do is if you have Netguard and All Apps Removed , they will take advantage of you being stupid enough not to have an Alphanumeric PW lock on Phone … These Narcissists Control Every Aspect of My Life and I have to PW Lock Everything With A Long Random Case Sensitive Alphanumeric Password and I cannot replace Letters with Symbols I have to add Symbols to the ends of Words also have to be Specific with Details : Example Password : i8sTqqpeoplE***123://///; (It has to be Like That) … No Characters Replacing Symbols , Case Sensitive , Alphanumeric , Long , Symbols … Dummies just use a 7z encrypted File as a Password Manager and PW Lock it … Using the same password is a bad idea , also many sites are breached by common CVEs … I could go on Log4Shell means developers should stop using Apache all together … They want you locked out of your Bank and Paypal Account so you can no longer Access Your Money and they can Gang Stalk You Some More , Just That Simple … Now with Computers we know The BIOS password can be reset and the SSD can be taken out and that Luks is Crackable and Inferior Drive Encryption so is Veracrypt and 7z encrypted files, the only thing that works is Alien Characters that have No Binary Instruction Period … Lineage OS and Ubuntu Touch will not work on Most Phones , also No MTP as of Now … As of Now if you get a Tracfone Phone and you De-Google it and install F-Driod, LBRY, Newpipe, Netguard, Brave Web Browser, Do Not Root The Phone, Set an Alphanumeric Case Sensitive Password Lock, you're still not completely set, however a Alphanumeric Case Sensitive Password Lock will prevent someone from linking a Google Account or Installing Remote Access Tools on your Phone … The Narcissist is Physically Doing it usually … In Netguard Disable and remove Apps that Connect to The Internet and Cell Network … Disable Bluetooth and Mobile Data of course , because All you need is WiFi for Downloads or MTP for Apps , Then The 4G Network for Two Factor Authentication all it is used for … Narcissists will always down talk everything , however these Gang Stalkers are Brainwashed and still get their News from The Corporate Media and not Multiple Internet Sources … You can waste your time with Systemd and XCB , Calculate Linux has Both Removed … These Gang Stalkers are a Waste of Your Time and Paid For by Your Tax Dollars … Then you have Mac Address Spoofing on Laptops to f4 or Random with The DNS Server 456011 which is the best DNS Server That I found … Many Phones have no Firewall …
